EDUCATION

ESPRIT School of Engineering

Computer Engineering, EUR-ACE Accredited (5-year integrated diploma), GPA 3.5

Grand Tunis, Tunisia

Sep 2024 – Expected Jun 2029

SAMIS High School

Cognia-Accredited Diploma, GPA 4.0 (99.07/100)

Taif, Saudi Arabia

Sep 2021 – Jun 2024

EXPERIENCE

Security & Reliability Engineer (Contract)

MP&D, working on AndroHost (game server hosting platform)

Jun 2026 – Present

Remote, New Jersey

- Run authorized vulnerability assessments and penetration testing across infrastructure, APIs, accounts, configurations, and deployment environments ahead of launch.
- Document findings by severity, impact, and reproduction steps with remediation guidance, then retest and validate completed fixes.
- Support code review, monitoring, and reliability work; test provisioning, billing, and dashboard workflows for launch readiness.

Software Engineer Intern

STEG, Tunisia's National Electricity and Gas Utility

Jul 2025 – Sep 2025

Ben Arous, Tunisia

- Documented the SCADA architecture supervising Tunisia's national grid: RTU data acquisition, IEC 60870-5 framing, and real-time database management, delivered to the dispatching centre team.
- Analyzed Automatic Generation Control logic holding grid frequency within a ± 0.2 Hz band; findings informed control set-point tuning.
- Reviewed OT infrastructure, Red Hat / legacy Windows coexistence, and OT-office network segmentation, feeding the security team's hardening plan.

OPEN SOURCE

Arch Linux Mirror | rsync, systemd, NGINX, Docker, Prometheus, Grafana, DNS

Dec 2025 – Present

- Built and operate Tunisia and North Africa's first official Tier 2 Arch Linux mirror, now serving 26,000+ unique IPs and 970+ GB at 100% uptime over the trailing 30 days.
- Automated the full sync lifecycle with rsync and systemd timers and containerized the NGINX/rsync pipeline with Docker Compose for portable, zero-touch deployment.
- Migrated from home server to VPS through 6 months of ISP CGNAT constraints; added a live Prometheus/Grafana dashboard tracking requests, throughput, and uptime.

PROJECTS

Disco Mind | Python, Ollama, XTTS v2, Docker

- Local-first AI app where 24 psychological skill voices respond to user input in real time, fully offline with no cloud or API cost.
- Wired local LLM inference (Ollama) to cloned-voice TTS (XTTS v2) behind a single self-contained interface.

Aquarium Management System | C, PIC16F877, PCB design, MikroC

- PIC16F877 embedded system monitoring temperature, water level, and lighting; drives actuators with manual override and interrupt-based safety alarms.
- Persisted thresholds and configuration across power cycles via EEPROM.

Starr | PHP, MySQL, JavaScript, HTML/CSS

- Full-stack educational platform (team of 6) with quizzes, messaging, role-based access, a points/badges system, and content moderation.

TECHNICAL SKILLS

Languages: C, C++, PHP, JavaScript, SQL, Bash

Systems & Infrastructure: Arch / Debian / Ubuntu Linux, systemd, NGINX, rsync, DNS, reverse proxy, high availability

DevOps & Monitoring: Docker, Docker Compose, Prometheus, Grafana, Tailscale, WireGuard, Git, CI/CD (learning Kubernetes, Ansible)

Security: Vulnerability assessment, penetration testing, network reconnaissance, OT/SCADA hardening

Embedded & Industrial: PIC microcontrollers, MikroC, MPLAB, PCB design, EEPROM, SCADA, RTU, IEC 60870-5, AGC

Spoken Languages: English (C2), Arabic (C2), French (B2)
